

## Cenergy Power Commissions Two Solar Systems at Rio Bravo Ranch

09.09.09, 04:31 PM EDT

BAKERSFIELD, Calif., Sept. 9 /PRNewswire/ -- Rio Bravo Ranch, one of the oldest and respectable California growers of citrus, almonds and walnuts, today announced the completion of two solar photovoltaic systems: a 100 kilowatt (kW) ground-mounted solar system and a 25 kW solar carport. Both solar systems were designed, engineered and installed by **Cenergy Power**, a commercial solar power integrator with market-leading solar solutions. The ground-mounted system will power a sizeable irrigation pump on the ranch. The solar carport will provide both power to **Rio Bravo's** corporate office and shading for employee cars.

The solar projects are direct evidence of **Rio Bravo's** commitment to environmentally sensitive agricultural and developmental practices. "Our goal for the solar projects are twofold- to continue on with our tradition of conservation and good land stewardship while receiving a competitive return on our invested capital," said **Jamie Nickel**, one of the principals of Rio Bravo Ranch. "**With Cenergy Power's** expertise and turnkey options, we were able to advance this goal. As a result, we are planning to significantly expand our solar initiatives to other ranch activities with **Cenergy Power's** assistance."
